International application No. PCT/US00/27134

I. Bas	sis of	the	repo	rt
--------	--------	-----	------	----

1.	the and	ith regard to the <b>elements</b> of the international application (Replacement sheets which have been furnished to e receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)): escription, pages:						
	1-10	)	as originally filed					
Claims, No.:								
	1-11	ı	as received on	03/08/2001	with letter of	01/08/2001		
2.	With regard to the <b>language</b> , all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.							
	The	se elements were a	vailable or furnished to this A	utnority in the to	ollowing language:	, which is:		
		the language of a t	ranslation furnished for the pu	rposes of the i	nternational search	(under Rule 23.1(b)).		
		the language of publication of the international application (under Rule 48.3(b)).						
		the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).						
3.	<ol> <li>With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:</li> </ol>							
		contained in the inf	ternational application in writte	en form.				
		filed together with	the international application in	computer read	lable form.			
☐ furnished subsequently to this Authority in written form.								
		☐ furnished subsequently to this Authority in computer readable form.						
		☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.						
The statement that the information recorded in computer readable listing has been furnished.					ble form is identical t	to the written sequence		
4.	The amendments have resulted in the cancellation of:							
		the description,	pages:					
		the claims,	Nos.:					
		the drawings,	sheets:					
5.			en established as if (some of) eyond the disclosure as filed		nts had not been ma	de, since they have been		

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

Yes:

Claims 3-6, 8-11

No:

Claims 1, 2, 7

Inventive step (IS)

Yes: Claims

No:

Claims 3-6, 8-11

Industrial applicability (IA)

Yes:

No: Claims

2. Citations and explanations see separate sheet

#### VI. Certain documents cited

1. Certain published documents (Rule 70.10)

and / or

2. Non-written disclosures (Rule 70.9)

see separate sheet

#### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

#### Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents: 1.

D1: US-A-5 594 080 D2: WO-A-99 20664 D3: XP002110148 D4: XP002110149

Document D1 (col. 7, line 61-col. 8, line 15, col. 9, lines 27-46 and col. 9, line 58) 2. discloses with respect to claim 1, a fibrous web material comprising a plurality of fibres comprising a polyolefinic homopolymer (see in particular col. 9, line 29) having an isotacticity of less than 60% [mmmm] pentad concentration.

Hence, the subject-matter of claim 1 is not novel (Article 33(2) PCT).

Moreover, polyolefinic homopolymers having an isotacticity of less than 60% [mmmm] pentad concentration are well known from Documents D2 (page 1, lines 30-33; page 5, lines 18-30); D3 (page 4353, last paragraph); D4 (page 51, 5th paragraph).

- Moreover, Document D1 (see in particular col. 9, line 29) is also novelty destroying 3. for claim 2 (Article 33(2) PCT).
- Document D1 (col. 7, line 61-col. 8, line 15, col. 9, lines 27-46 and col. 9, line 58), 4. discloses all the features of claim 7, i.e. a method for manufacturing fibers from polymeric material comprising a step of processing said polymeric material selected from the group of wet spinning, dry spinning, spinning, semi dry spinning (solvent evaporation or sedimentation), and combinations thereof, the polymeric material comprising a polyolefinic homopolymer having a an isotacticity of less than 60% of [mmmm] pentad concentration.

Hence, the subject-matter of claim 7 is not novel (Article 33(2) PCT).

Claim 8 discloses a method for manufacturing a fibrous web material comprising the 5. steps of providing fibers of polymeric material and combining said fibers into a web material.

The subject matter of claim 8 differs from the already well known methods for manufacturing a fibrous web material known from the prior art only in that the fibres used comprise a polyolefinic homopolymer having a an isotacticity of less than 60% of [mmmm] pentad concentration.

However, the simple fact of using a specific kind of fibres does not alter in any way the well known methods for manufacturing a fibrous web. Moreover as already argued above such kind of fibres are already known from the prior art.

The same arguments apply for claim 10.

Thus, the subject-matter of claims 8 and 10, does not involve an inventive step and does not satisfy the criterion set forth in Article 33(3) PCT.

Dependent claims 3 to 6, 9 and 11 do not appear to contain any additional features 6. which, in combination with the features of any claim to which they refer, meet the requirements of the PCT with respect to inventive step (Article 33(3) PCT), the essential features thereof come within the scope of the customary practice followed by persons skilled in the art, especially as the advantages thus achieved can be readily contemplated in advance.

#### Re Item VI

#### Certain documents cited

Certain published documents (Rule 70.10)

Application No Patent No

Publication date (day/month/year)

Filing date (day/month/year) Priority date (valid claim) (day/month/year)

DE-A-198 16 154

21.10.99

09.04.98

Document DE-A-198 16 154 does not from part of the state of the art according to Rule 64.1 b) however, it appears to disclose all the features of the claimed invention. Moreover, the applicant should be aware that the validity of the claimed priority has not been checked.

#### Re Item VIII

#### Certain observations on the international application

Although claims 7, 8 and 10 have been drafted as separate independent claims, they appear to relate effectively to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought and in respect of the terminology used for the features of that subject-matter. The aforementioned claims therefore lack conciseness. Moreover, lack of clarity of the claims as a whole arises, since the plurality of independent claims makes it difficult, if not impossible, to determine the matter for which protection is sought, and places an undue burden on others seeking to establish the extent of the protection.

Hence, claims 7, 8 and 10 do not meet the requirements of Article 6 PCT.

In order to overcome this objection, it would appear appropriate to file an amended set of claims defining the relevant subject-matter in terms of a single independent method claim followed by dependent claims covering features which are merely optional (Rule 6.4 PCT).

## CLAIMS (amended 01-A 2001)

- A fibrous web material comprising a plurality of fibers
   characterized in that
   said fibers comprise a polyolefinic homopolymer having a an isotacticity of
   less than 60% of [mmmm] pentad concentration.
- An article A fibrous web material according to Claim 1
   wherein
   said homopolymer is polypropylene.
- 3. An article comprising a fibrous web material according to Claim  $\underline{1}$ .
- An article according to Claim 3
   wherein
   said article is a hygienic article.
- A hygienic article according to Claim 4
   wherein
   said article is a disposable absorbent article.
- An article according to Claim 3
   wherein
   said first element is a construction element of the article.
- 7. A method for manufacturing fibers from polymeric material comprising a step of processing said polymeric material selected from the group of wet spinning, dry spinning, melt spinning, semi dry spinning (solvent evaporation or sedimentation), and combinations thereof characterized in that said polymeric material comprises a polyolefinic homopolymer having a an isotacticity of less than 60% of [mmmm] pentad concentration.
- 8. A method for manufacturing a fibrous web material comprising the steps of providing fibers of polymeric material
  - combining said fibers into a web material characterized in that

said fibrous web ma're all comprises a polyolefinic homopolymer having a an isotacticity of less than 60% of [mmmm] pentad concentration.

- 9. A method for manufacturing a fibrous web material according to Claim 8 wherein said step of combining fibers is selected from the group of meltblowing, spunbonding, carding, air laying, wet laying, weaving, knitting, bailing, and combinations thereof.
- 10. A method for stabilizing a fibrous web material comprising the steps ofproviding a fibrous web material
  - stabilizing step said fibrous web material characterized in that said fibrous web material comprises a polyolefinic homopolymer having a an isotacticity of less than 60% of [mmmm] pentad concentration.
- 11. A method for stabilizing a fibrous web material according to Claim 10 wherein said step of stabilizing is selected from the group of hydroentangling, thermo bonding, pressure bonding, air through bonding, needling, resin bonding, combinations thereof.
